k. *Description of Amendment:* Niagara Mohawk Power Corporation and Northern Electric Power Company, LP (licensees) request a temporary suspension of the minimum flow requirement for a period of up to 10 years. The licensees request that they be allowed to work with the New York State Department of Environmental Conservation (DEC), General Electric (GE), and the U.S. Environmental Protection Agency (EPA) in the removal of pure polychlorinated biphenyls (PCBs) from the shale bedrock of the bypassed reach. The licensees' contribution to the removal of the PCBs would be to suspend the minimum flow to the bypassed reach for a period of up to 10 years. The suspension of flow to the bypassed reach would allow the EPA, GE, and the DEC to inspect the reach and determine the appropriate remedial measures. During the suspension of minimum flows the licensees propose to divert the minimum flows through the project intake canal, turbines, and/or auxiliary release works. Flows in excess of the projects hydraulic capacity would be spilled over the project dam. The licensees propose to immediately return the minimum flow to the bypassed reach upon the notice of the DEC. If the remediation of the PCB problem is not complete after five years, the involved parties would review the progress made and make recommendations on continuing or ending the flow suspension.
